McDonnell Aircraft	Hazelwood, MO	09/28/90	10/03/90	09/25/90	McDonnell Aircraft	EPA	Class 1 Modification (M0780-1164 (08/88))	Submittal added TC waste codes D035 and D040. Disposition of these wastes was difficult to determine, as the form submitted did not list process codes. It was deduced from an inspection form of HMDMS that these TC wastes would be placed in tanks or the container storage area. It is unclear if new capacity or management practices are required. A revised Waste Analysis Plan and request for the facility mailing list was included with the Part A submittal.

Dear Mr. Haake:

On March 29, 1990, the U.S. Environmental Protection Agency (EPA) promulgated the Toxicity Characteristic (TC) Rule. The TC Rule modified the toxicity characteristic by adding 25 new constituents. To continue on-site management of waste exhibiting the toxicity characteristic for the newly listed constituents, an existing interim status or permitted Treatment, Storage, or Disposal (TSD) facility was required to submit a revised Part A permit application and/or appropriate permit modification by September 25, 1990.

Your submittal, which consists of your Class I permit modification request for the Hazelwood, Missouri facility, was dated September 28, 1990, and received at EPA on October 3, 1990.

The Missouri Department of Natural Resources (MDNR) is responsible for the review of your submittal. Any questions regarding the technical review of your submittal should be addressed to:
